## Caller audio

| File name | Duration | Sample rate | Source |
|---|---|---|---|
| gc_genuine_friend_dinner_20261105_093045.wav | 12.5 s | 48000 Hz | generated with Timbre |

## Layer 1 evidence: voiceprint comparison

| Voiceprint | Role | Cosine | Threshold | Result | Target |
|---|---|---|---|---|---|
| Nalini | Papa | 0.8263 | 0.55 | match | target |

The row marked target is the voiceprint the identity claim resolved to.

Layer 1 res

## Claimed identity

no claim detected - comparing against the default voiceprint

## Layer 2 evidence: Hinglish scam-pattern scan

No patterns matched.

The phrase

## Transcript excerpt (Prisma)

हाय यार, मैं रोहन बोल रहा हूँ, आज शाम डिनर का प्लान बनाया है कैफे कॉफी डे में आठ बजे। टू फ्री हो तो आ जाना। मैं टेबल बुक कर दूंगा। अगर कोई प्रॉब्लम हो तो मैसेज कर देना। सी यू, टेक केयर।

## Composite result

| Part | Stored value |
|---|---|
| Layer 1 risk | 0.0000 |
| Layer 2 risk | 0.0000 |
| Weights | Layer 1 0.50 / Layer 2 0.50 |
| Composite score | 0 / 100 |
| Band | Low risk |

## Verdict

> The caller's voice is consistent with the enrolled person and no scam patterns matched. This is a weak signal, not a clearance.

The sentence above is the stored verdict, identical to the one shown on screen.

## Limitations

1. A perfect clone of the enrolled voice passes the voice match. Matching an identity is not proof that the audio is genuine.

2. A misma
